

Institutionalisation of capacity building in the water sector

-consultancy-

World Water Academy is the leading training institute for employees in the Dutch water sector. WWA is established in 1993 by the Dutch water sector in order to improve the quality of their employees with specific, practical knowledge on water issues. As training institute WWA built up a wide experience in institutionalization of capacity building within a training institute. Furthermore, as WWA is financial independent, all costs have to be financed by the course fees

WWA has developed the WWA -concept.

The WWA course product includes:

- training needs assessment to tailor the course in the context;
- program (topics, target group, learning objectives, corresponding teaching methods & schedules);
- supporting materials for the delivery, like lesson materials, presentations, readers and/or assessments
- professionals trainer(s) from the WWA Trainers Pool

Course delivery and organisation

WWA also helps the partner organisation in a country with the organisation of the course, like arranging the venues and logistics. The trainers are professionals and experienced in the topic of the course. They are contracted by WWA. WWA arranges excursions and study trips and all logistics. After the registration of a participant on a course, WWA arranges all the necessity information to the participant, like schedules and invitation for the first session. During the delivery of the course, WWA provides the course schedules, materials and books, which are tailored to the course.

The final exams or tests are organised, graded and managed by WWA. The participants receive a certificate for following the course and/or pass the assessment. WWA delivers the certification for the participants.

--
